

Benefits of a one card solution.

With wired tSec card readers and Protege Wireless Locks, you can use a single smart card/fob or ICT Mobile Credential to gain access to and navigate any Protege secured apartment or multi-tenant building.

The amount of tenants that cite "lack of security" as their reason for vacating

The amount of Gen Z tenants surveyed say smart locks are more important than a spare bedroom

The amount of Millennial tenants surveyed that are willing to pay 20% more for an apartment with smart tech like keyless locks and mobile-controlled security

Key Features.

- > No need to wire the whole building. Use an online ICT card reader for common areas doors and the offline Protege Wireless Locks for apartment units
- > No juggling keys and cards or having to navigate through multiple apps to find the right card for the right lock
- > Available with ICT Mobile Credentials, MIFARE DESFire smart cards, fobs, and garage door remote
- > Gain streamlined access management for greater insights thanks to simplified reporting and oversight. No need to pull reports from multiple databases and spend hours aggregating data
- > Lessen the innate security risks from different databases by ensuring that correct permissions and rules are set across your building
- > Easily issue, edit, and revoke access from a single platform
